

## **Computer Applications Technology / Rekenaartoepassingtegnologie**

CAT is a subject dedicated to master the use of office productivity applications such as Microsoft Office (Word, Excel, Access and PowerPoint) and the effective use of the operating system Windows.

There is also a theory component where a number of ICT technologies are being studied.

(E.g. Networks, the Internet, Information management & System technologies.)

### **CAT as university admission subject:**

CAT is not on the dedicated list, and does not count as one of the FOUR subjects in which a learner must obtain 50% or more to get admitted to university. CAT does count fully towards the TP score a learner must obtain to get admitted if he obtained 50% or more in FOUR of his other subjects from the dedicated list.

*RTT as vak is toegewy aan die studie en bemeestering van kantoor produktiwiteit toepassings soos Microsoft Office (Word, Excel, Access en PowerPoint) en die effektiewe gebruik van 'n bedryfstelsel soos Windows.*

*Daar is ook 'n teorie komponent wat fokus op 'n aantal IKT tegnologieë. (Bv. Netwerke, die Internet, Inligtingsbestuur & stelseltegnologie.)*

### **RTT as vak vir universiteitstoelating:**

*RTT is nie op die lys van "aangewese" vakke nie, en tel nie as een van die VIER vakke waarin 'n leerder 50% of meer moet behaal vir toelating nie. RTT dra wel volwaardig by tot die TP telling wat 'n leerder moet behaal om toelating te verkry indien hy 50% in VIER van sy ander vakke behaal het wat op die aangewese lys voorkom.*
